

How to access Hwb.

Type Hwb into your search engine to log in.

This video starts from an empty browser and takes parents/carers through logging in to Hwb with their children – then in to j2e.

[How to log into Hwb](#)

This second video looks specifically at how parents can help their children to access a tile that you may have produced following my guide.

[How to use J2E tiles](#)

A video explaining how parents can support our youngest learners by uploading images of their ‘non digital’ work into j2e.

[How to upload childrens non digital work to J2E](#)

Click on

You will then see this screen.

JiT is designed for the youngest learners, providing 8 integrated tools that work across platforms. Learners can write, paint, create turtle programs, charts and pictograms, branching databases and animations and then mix them all together into a personal **mix**. Learners can also record audio to accompany their work.

All the work is saved into learners’ J2e **my files** area and can be seen by staff at the school, who can also use the **learning conversation**, which encourages learners to self-reflect and enables teachers to give instant feedback either by text or voice on a piece of work or a whole folder. Please **do not** change your child’s password for Hwb.

To name your work: Type the name of your work here.

To save your work click on this icon.

To get a blank page – click on here:

Paint

1. To use the paint tool click on the blue **paint** tab at the top of the page.

2. Select a template or picture as your background.

You can scroll up and down to have more of a selection.

- Use the controls on the left hand side of the page to change the thickness of your paint brush and a colour. You can also switch to the fill option by clicking on the **spilling paint can** icon, which will enable you to fill a space with one colour.

- To add animations to your work, click on the word that appears between two arrows on the left hand side of the page. Select a **theme** from the dropdown list and then use the arrows to find an animation you would like to add. Use the + , - and **arrow** buttons to resize and flip your animation. You can then drag and drop it onto your background.
