

Thump, Thump, Thump

(Tune: Supercalifragilisticexpialidocious)

Thumpity, thumpity, thump, thump, thump

Your heart is pumping blood,

Thumpity, thumpity, thump, thump, thump

Your heart is pumping blood,

Up and down and all around

It travels through your vessels,

Bringing food so parts will grow,

That's why your body's special!

The Brain

As wrinkled as an elephant,
Gray like a cloud,
It can make you feel happy,
It can make you feel proud,

It lets you know you're sleepy,
And helps you read and write,
It never stops its thinking,
It even dreams at night!

Ignore the American spelling of 'grey' in 'The Brain'!

A Look at the Lungs

Breathing

Breathe in!
Breathe out!
Breathe in!
Breathe out!

All day
Air goes
In your lungs,
Out your nose.

Inhale!
Exhale!
Inhale!
Exhale!

Wide awake,
Fast asleep,
Day and night,
You keep

Breathing in,
Breathing out.
You don't even
Think about

Breathing in,
Breathing free.
Breathe
Involuntarily!

The Kidney and Excretory System

A **kidney** will help the urine to flow,
as long as your **blood** pressures don't get too low.

Down the **ureter** to the **bladder** below,
a drop of urine knows where to go.

After it floats in the **bladder** so round,
down the **urethra** to make a splashing sound.

If the **kidney** stops working and doing its job,
your skin becomes flaky and you turn into a slob.

So drink up your water and know in your hearts,
that you kidneys will filter and do their part!
