## What to do...

1. Imagine that you have $£ 20$ to spend on whatever you like! What would you spend it on?

## £20 to

 spend aroundThis activity helps your child to solve money problems using one or more steps. Encourage your child to select a number of different items so that they need to add several amounts before working out the amount of change they have.
2. Take a look in some catalogues or in a local shop. Choose some nice things - don't choose just one item! Cut out pictures or draw what you would like and stick them on your shopping list.
3. Keep track of how much you spend and then when you have 'shopped till you dropped', work out how much change you have!
4. Ask someone at home what they would buy with their $£ 20$. Create a shopping list for them, making sure that they don't overspend! How much change do they have at the end?

Items we bought

| Item | Cost | Item | Cost |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

| Total |  |  |  |

I would buy a new pair of fingerless socks, a yummy chocolate Earth bar, a Alien FC scarf and a new tyre for my bike.
