

Air Resistance investigation:

Aim of investigation (What are you trying to find out?)

Does surface area affect how much air resistance slows down a falling object?

Hypothesis (What do you think will happen?)

---

---

Fair Test

Variables I will keep the same: (fixed or controlled variables)

1. -
2. -
3. -

Only variable I will change: (independent variable)

---

What will I observe /measure?

---

Method How will I carry out my investigation?

---

---

Results (think about how you'll present your results?)

---

---

Conclusion (try to answer the aim of the investigation. Was your hypothesis correct?)

---

---
