

School Entry Health Review

This information may be helpful now that your child is in full time school.

Does your child have a medical condition e.g. Asthma, Diabetes, Eczema, Epilepsy, or a severe allergy - that may require emergency injection?

Please ensure that your child's school is informed about your child's medical condition and of any medication or treatment your child requires during the school day. The school may suggest that an individual health care plan is in place in order to support your child.

Are you concerned about your child's vision, hearing, or speech?

- A distance vision screen will be undertaken in school by the School Nursing Service. *This is the only routine vision screen in school. It is recommended that all children should have free regular eye checks with their local optometrist (optician).*
- A hearing screen will be undertaken in school by the Audiologist.
- Referrals for speech therapy are made by your child's school. *Please discuss with your child's teacher.*

Are you concerned about your child's growth e.g. short or tall stature, under or overweight?

Your child's growth will be measured by the School Nursing Service.
