The diag	rams show how tall	l and how wide the mi	irrors in the telescope are.	
	1.3m	1.5m	0.75m ↔	
	arrow shows how t	tall the telescope is.	m tall	2
	e arrow shows how ut this width.	wide the telescope is	s.	
	· · · · · · · · · · · · · · · · · · ·			

The telescope has two 'rings' of hexagonal mirrors.

The 1st ring has 6 mirrors.

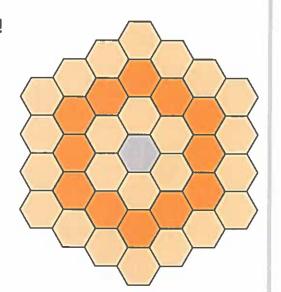

The 2nd ring has 12 mirrors.

Scientists would like bigger telescopes!

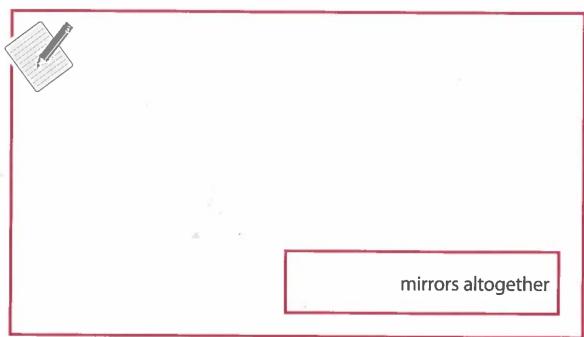

The 3rd ring would have 18 mirrors.

A telescope with 4 rings would have a lot of mirrors!

Altogether, in all the rings, how many mirrors would it have?

The cards can be put in pairs to make different totals.

Use all six number cards.

Put them in pairs to make the totals below.

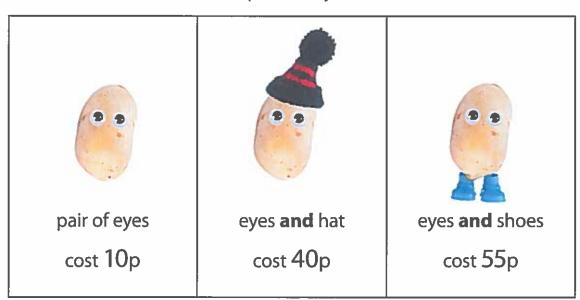

Use all six number cards again.

Show different pairs that make the totals.

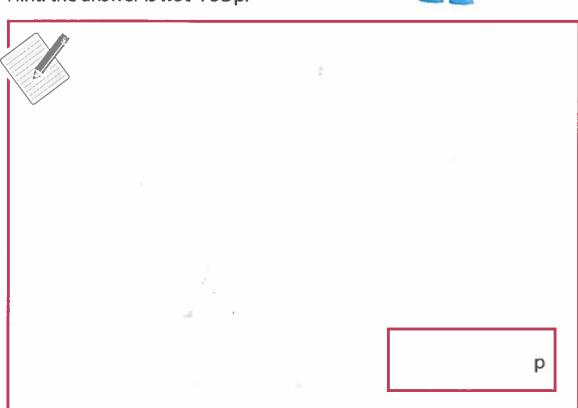

3 Here are some costs to make potato toys.

This potato has eyes, hat and shoes.

Work out the cost.

Hint: the answer is ${f not}\ 105 p$.

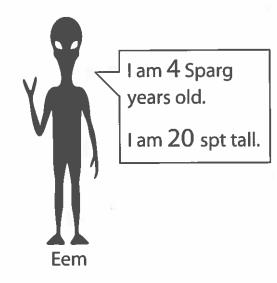

4

Eem lives on planet Sparg.

Ifor lives on planet Earth.

1 Sparg year = 2 Earth years

How old is Eem in Earth years?

Earth years

How old is Ifor in Sparg years?

Sparg years

Ifor and Eem are the **same** height, so

1 spt = cm

In a classroom there are . . .

• 28 pupils

• 1 chair for each pupil and 1 table for each pair

• a teacher

a chair for the teacher and her own table.

The people, the chairs and the tables all have legs.

Altogether, how many legs are there?
